

# Time-series Foundation Model Evaluation

## Executive Summary

Thesis project

Evidence checked through 7 August 2026

### Decision snapshot

**No remote TSFM evaluation has completed.** There is no quantitative basis for choosing univariate, known-covariate, or identity-covariate inference.

### 1 Evidence inventory

| Result object                     | Count |
|-----------------------------------|-------|
| Archived result files             | 0     |
| Completed schema-1 manifests      | 0     |
| Recorded remote evaluations       | 0     |
| Chronos-2/TabPFN-TS result tables | 0     |
| Result plots                      | 0     |

### 2 Claims retained

None about model accuracy, covariate value, preprocessing, or runtime. The local repeat smoke validates code paths only and is not included as foundation-model evidence. The zero-count inventory is the complete result record.

### 3 Next evidence

Submit one unmodified test launcher and verify its completed `summary.json`, per-user metrics, and report ingestion. Then run the full univariate family before controls and covariates. Protocol details remain in the experiment guideline.
